CRYPTOCURRENCY PRICE TRACKER

INTRODUCTION

Cryptocurrencies are digital assets whose values fluctuate continuously in global markets. Monitoring these prices manually is inefficient due to rapid changes.

This project focuses on developing an automated system to track cryptocurrency prices using Python-based web scraping and data processing techniques.

OBJECTIVE

1. To develop an automated cryptocurrency price tracking system.
2. To extract real-time market data from trusted sources.
3. To store structured data for further analysis.
4. To improve efficiency in financial data monitoring

PROBLEM

Manual tracking of cryptocurrency prices is time-consuming.

Data changes frequently and requires real-time updates.

Difficult to maintain historical records without automation

TECHNOLOGIES USED

- * Python Programming Language
- * Selenium – Web Automation Tool
- *Pandas – Data Processing Library
- * CSV/Excel – Data Storage Format
- * VS Code – Development Environment

OUTPUT

The system generates a structured dataset containing:

- * Cryptocurrency Name
- * Current Market Price
- * Market Capitalization
- * Ranking Information

All data is saved automatically for future reference.

MARKET CAP
BITCOIN STILL THE KING

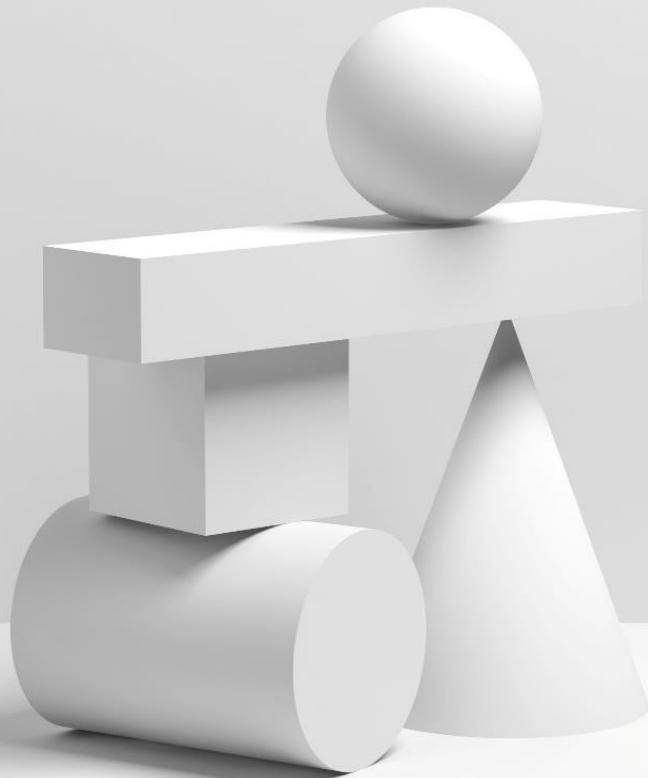

TOKEN	PRICES	MARKET CAP
 BITCOIN (BTC)	\$111,261.63	\$2,215,594,122,853
 ETHEREUM (ETH)	\$4,602.58	\$555,583,361,239
 XRP (RIPPLE)	\$3.00	\$178,995,423,912
 TETHER (USDT)	\$1.00	\$167,173,975,983
 BINANCE COIN (BNB)	\$859.50	\$119,724,451,090
 SOLANA (SOL)	\$203.68	\$110,121,368,582
 USD COIN (USDC)	\$0.9998	\$69,009,860,801
 DOGECOIN (DOGE)	\$0.2209	\$33,300,770,251
 TRON (TRX)	\$0.3504	\$33,178,770,251
 CARDANO (ADA)	\$0.8655	\$33,178,770,251

CONCLUSION

This project successfully demonstrates an automated approach to tracking cryptocurrency prices.

It enhances data collection efficiency and provides structured outputs for analysis.

The system is useful for beginners in Python, data analytics, and automation.

THANK YOU
